Your complete office toolkit

User Manual • Version 9 • English edition
Website: https://dbdocuments.net.in

Seven tabs, one workspace

26AS Converter - Convert a standard 26AS XLSX into the 15-column output format.

PDF to Excel - Extract selectable PDF text and tables into Excel worksheets.

PDF to Image - Download PDF pages as PNG or JPG images.

PDF Merge - Combine two or more PDF documents into one PDF.

Smart Excel Merge - Combine spreadsheet rows with matching column headings.

Crack your PDF - Attempt limited recovery of common passwords and numeric PINs.

Online PDF Edit - Save added text, markup, drawings, images and page changes.

Getting started

Open the website → Login / Register → Create account. Enter your name, email and a password of at least 10 characters. Each tool/mode includes one successful free use. Failed or cancelled runs do not consume the free trial.

You can download this guide at any time using the website’s “Download User Manual (PDF)” button.

01 / 26AS Converter

Create a clean 15-column workbook from standard 26AS data, including PART-I / II TDS and PART-VI TCS.

01 Open the “26AS Converter” tab. Select your original downloaded .xlsx file.

02 The ₹199 plan processes one file per run. The ₹499 plan supports up to 20 files per run. Single and batch modes have separate free trials.

03 Click “Convert to Sample Format”. Log in if prompted.

04 When processing finishes, review the transaction count and the preview of the first 10 rows.

05 A single conversion downloads an XLSX. A batch downloads a ZIP containing the converted workbooks and conversion-report.txt.

Important information

The output includes a PART column. TCS values map to the existing TDS-named output columns. This tool supports the standard 26AS layout; it does not convert every arbitrary spreadsheet.

20 MB per XLSX • 50 MB total • maximum 20 files

02 / PDF to Excel

Extract selectable text from a digitally generated PDF into page-wise worksheets.

01 Open “PDF → Excel” and select your PDF file or files.

02 Use a PDF containing selectable text or tables. Scans and photographs do not contain the text this tool requires.

03 Click “PDF to Excel & download”. The tool groups text into rows and columns using its position on the page.

04 Each PDF page becomes a separate worksheet: Page 1, Page 2 and so on.

05 Download the XLSX or batch ZIP. Compare headings, dates and amounts with the original PDF before relying on the extracted data.

Important information

Inferred rows and columns may need review or adjustment. Scanned/image-only PDFs require OCR, which is not included in this version. Such a failure does not consume a free trial.

50 MB per PDF • 100 MB total • maximum 20 files

03 / PDF to Image

Render each PDF page as a PNG or JPG image.

01 Open “PDF → Image” and choose your PDF file or files.

02 Choose PNG or JPG under “Image format”. PNG is useful for sharp document text; JPG can produce smaller photographic images.

03 Choose Standard, High or Very High under “Render resolution”.

04 Click “PDF to Image & download”. Each page is rendered separately.

05 A single-page output downloads as an image. Multiple pages or files download as a ZIP with source filenames and page numbers.

Important information

For a very large page or limited device memory, choose Standard resolution. Original page proportions are retained. If a source file cannot finish rendering, that file is reported as failed.

16 million pixels per rendered page • 100 MB output per source PDF • 150 MB combined output

04 / PDF Merge

Combine original PDF pages into one document in the displayed selection order.

01 Open “PDF Merge” and select at least two PDFs.

02 Review the displayed file order. The output follows this order; reselect your files if the order is incorrect.

03 The ₹199 plan accepts two input PDFs per run. The ₹499 plan accepts up to 20. Both plans include this tab.

04 Click “PDF Merge & download”. The tool copies original PDF pages rather than converting them into screenshots.

05 Download MERGED_PDF.pdf and check the page order and page count.

Important information

Encrypted, damaged or unsupported inputs may fail to merge. Digital signatures may not remain valid after merging; retain your original documents. Failed or cancelled merges do not consume the free trial.

2 input files on ₹199 • up to 20 on ₹499 • 50 MB per PDF / 100 MB total

05 / Smart Excel Merge

Find the main table below report titles or summaries and combine matching data.

01 Open “Smart Excel Merge” and select at least two spreadsheet files.

02 Supported inputs include XLSX, XLS, XLSM, XLSB, CSV, TSV, XML-XLS, ODS and supported legacy spreadsheet formats.

03 Click “Smart Excel Merge & download”. The tool scans the first 300 rows of each worksheet to find the main table header.

04 Unique matching headings are aligned even when their column order differs. The dominant heading structure becomes the output layout.

05 Open MERGED_WORKBOOK.xlsx. Review the “Merged Data” worksheet and, if anything was skipped, the “Merge Report” worksheet.

Important information

Cell values are merged; source formatting and macros are not preserved. Totals, footer notes, blank separators and secondary tables can end the main data block. Different headings are skipped and reported.

2 input files on ₹199 • up to 20 on ₹499 • 20 MB each / 50 MB total

06 / Crack your PDF

Attempt recovery using common passwords and short numeric PINs. Unlocking is not guaranteed.

01 Open “Crack your PDF” and select PDF files you own or are authorised to modify.

02 Under “Recovery mode”, choose common passwords plus numeric PINs up to four digits, or the extended mode up to six digits.

03 Click “Try recovery & unlock”. You do not need to enter the existing password.

04 Watch the attempts and elapsed time. Use “Stop processing” if you want to cancel the run.

05 If recovery succeeds, download the verified password-free PDF. A batch ZIP contains successful outputs and recovery-report.txt.

Important information

The tool cannot recover every unknown password. Each source PDF has a two-minute search limit; even a six-digit search may not finish with newer encryption. Unsuccessful searches, timeouts, failures and cancellations do not consume the free trial. A paid plan does not guarantee recovery.

50 MB per PDF • 100 MB total • two-minute recovery limit per source PDF

07 / Online PDF Edit

Click to replace selectable source text, add new text, insert images and change the page order.

01 Open “Online PDF Edit” → “Upload a PDF to edit”. Opening or editing a document does not consume the trial.

02 The default tool is “Click to add / edit text”. Click blank space to open a text box at that location. Click selectable source text to open its current text for replacement.

03 Keep original PDF font is the default for source text. If its subset lacks new letters, upload the matching full TTF/OTF font; replacement fonts require your explicit choice. Set size and colour, and click “Apply text” (Ctrl+Enter). Escape cancels. Source text in the selected region is removed before its replacement is written. Clearing the text and applying removes that selected text.

04 Drag source or edited text to reposition it. The green Move handle also drags selected text. Arrow keys move it 1 pixel; Shift+Arrow moves 10. A short click opens editing. Undo, shapes, drawing and images remain available.

05 Use Previous/Next to browse pages. Move page earlier/later changes their order. Remove page deletes a page; at least one page must remain.

06 Click “Save & download edited PDF”. A successful save consumes the free use. A failed or cancelled save does not. Use “Discard changes / close” to leave without saving.

Important information

Scanned/image-only text cannot be selected without OCR. Source text may be split into separate chunks; unavailable fonts require a matching font file. Complex layouts need review. Review the final PDF. A cover box is visual only, not secure redaction. Editing can invalidate digital signatures. Keep the original.

50 MB input PDF • PNG/JPG up to 10 MB • up to 200 added items • Undo last 30 edits

Plans, trials and login

Both paid plans include all seven tabs. File-count and batch limits differ.

Plan	Included access
Free trial	One successful use per tool/mode. A batch counts once if at least one source file succeeds and an output is prepared.
₹199 / 30 days	Single-file conversions, PDF recovery and Online PDF Edit. PDF Merge and Smart Excel Merge accept two input files per run.
₹499 / 30 days	All tools, conversion batches and merges with up to 20 input files per run. Online PDF Edit opens one PDF at a time.

01 Open “Plans”, select a plan and complete Razorpay checkout. Live checkout charges real money.

02 Once payment is captured and verified, your account bar shows the plan and expiry. If activation is delayed, use “Check payment / refresh plan”.

03 Open “Account” → “Payment history” to review purchased periods. Each payment provides 30 days; automatic debit is not included.

04 Renewing the same plan extends its expiry. Upgrading starts a separate higher-plan period. Only one login session is active: signing in elsewhere ends the previous session.

How successful use is counted

Success is recorded immediately before the output is offered for download. The website cannot confirm whether your operating system saved the file. If an abandoned browser leaves a pending run, log in again before retrying. A pending reservation expires within one hour.

Quick help and safe usage

Common messages, their meaning and what to do next.

“Please log in” / session ended

Log in again. Signing in on another browser or device ends the previous session. Tabs in the same browser share one session.

“Free trial already used”

This feature/mode has already completed its successful free use. Choose a ₹199 or ₹499 plan. Failed or cancelled runs do not consume a trial in this version.

“A trial is already running”

Finish or stop the current run. After a browser crash, log in again to create a new session. Parallel free runs for the same feature are not allowed.

“No selectable text / OCR required”

The PDF is scanned or image-only. PDF to Excel needs selectable text. You may still use PDF to Image or add text/markups in the PDF editor; original scanned text cannot be selected for replacement.

Payment debited, plan not active

Click “Check payment / refresh plan”. If the issue continues, give the site owner/support your payment ID and account email. Never share a card PIN, OTP, password or API secret.

File too large / engine failed

Choose a smaller file or batch, lower the image resolution to Standard, or reload the browser. Use a current Chrome, Edge or Firefox version. Keep a backup of original documents.

Privacy and document limitations

Files are processed in your browser/on your device. Account, session, trial and payment metadata are stored on the server. Original files are not overwritten; output downloads as a new copy. PDF editor covers are not secure redaction. Password recovery is not guaranteed.
